OF SCIENCE AND TECHNOLOGY

# Invitation

Launch of the SCIONA Project - Co-designing conservation technologies for the Iona - Skeleton Coast Transfrontier Conservation Area of Angola and Namibia.

The Vice-Chancellor, Dr Tjama Tjivikua, and the Ambassador of the Delegation of the European Union to Namibia, Jana Hybaskova cordially invite you to the launch of the SCIONA project.

The Iona - Skeleton Coast Transfrontier Conservation Area (TFCA) is one of seven large transboundary conservation areas in Southern Africa. It connects the Namib Desert ecosystem's northern extent in Namibia to Iona National Park in southern Angola. The project aims to strengthen cross-border management and wildlife law enforcement by co-designing and implementing conservation monitoring technologies with communities in the TFCA.
